Choice Mixed Forcing and Bedding Hyacinths

In Separate Colors.

These mixtures are second size bulbs selected from the named varieties, for planting out doors or for forcing in the greenhouse, where a quantity of bloom is desired for cut flower work.

Where only a few bulbs are wanted for specimen plants in pots or glasses, we would advise using the named sorts.

DUTCH HYACINTHS

How to Grow Them

Pot Culture—Use a 4 or 5 inch pot for each bulb, a light rich, sandy soil is best. The upper surface of the bulb should show above the soil. After potting, water thoroughly and place in a dark cool cellar, covered up with sand or ashes until well rooted; this is generally from two to three months.

Glass Culture—Fill the glass so that the base of the bulb will just touch the water and set away in a cool dark place until well rooted. Change the water frequently.

Out-Door Culture—Plant in October or early November about six inches apart and four inches deep. Cover the bed with short manure during the winter.

Choice Named Hyacinths

French Roman Hyacinths

These are especially valuable for forcing and pot culture in the house, each bulb producing from two to six spikes of dainty, very fragrant flowers.

If planted early in September they can be brought into flower in November, and by keeping them under cover and bringing into the light when wanted, a succession of bloom may be kept up until May. They are not considered hardy as far north as this, but by protecting well from severe frosts we have had very pretty beds of them early in spring.

TULIPS

Garden Culture of Tulips—Any good soil, well enriched, will suit Tulips. October, or early in November, is the proper time to plant them. Set them four or five inches apart, and about three inches deep. Protect during the severe months of winter with a covering of straw or manure.

All the early Tulips are adapted for pot culture in the house. The Duc Van Tholl varieties can be forced into bloom for Christmas. Plant at least three or four bulbs in each pot.

The earliest blooming varieties are marked A, next B, and so on in their order. The number before the names denotes the height of their growth in inches. 25 bulbs at 100 rate; 250 at 1000 rate.

N. BICOLOR VICTORIA.

NARCISSUS

DAFFODILS.

No class of Bulbs is more satisfactory and none so easily taken care of as the Daffodils. They appear just after the snow and ice of winter and enliven our gardens and lawns. Nothing can excel the beauty and chastity of their blooms and they have the advantage of being good for an unlimited number of seasons, if planted out in some spot where they can be allowed to mature their foliage. They are perfectly hardy and withstand our severe winters without protection.

Should be given the same treatment as recommended for Hyacinths either for indoor or outdoor cultivation.

PAEONIES

CHOICE HERBACEOUS VARIETIES.

Paeonies have continued to increase in popular favor with each succeeding year as pre-eminent among our hardy perennial plants. In response to the increasing demand, cultivators of this beautiful plant have enthusiastically engaged themselves in introducing and propagating new varieties, aiming at more perfect flowers of more delicate tints and deeper, richer shades. The new varieties themselves sufficiently attest the success of these efforts. Not to have seen any of them at its best is to have missed a flower exquisitely lovely. From these and our standard varieties one may find any shade or combination of colors he may desire to enhance the beauty of his lawn or herbaceous border.

No class of plants is more easily grown than Paeonies, and few repay the care given them so generously. They are perfectly hardy and thrive in almost any soil, but any extra attention given them will be amply repaid; deeply cultivated and well enriched loam suits them best. In shady places, where few plants will succeed, Paeonies will grow luxuriantly. Such spots are usually to be found, and the colors of the flowers are brighter and they last much longer than if fully exposed to the sun. The plants, however, thrive equally well in sunny situations, and planted in front of shrubbery or on either side of walks they are very effective.

SOW CURRIE'S LAWN GRASS SEED

Produces a Rich, Thick and Velvety Lawn the First Season

Composed of Evergreen Grasses Suitable for our American Climate and made up from only the finest and cleanest grades of seed.

Our Mixtures are suitable for Large or Modest Lawns, Embankments, Slopes, Terraces, Putting Greens and Shady Places, and will keep green from early spring till fall.

Sow at the rate of 1 quart to 250 square feet; 1 pound to 400 square feet; 5 pounds to 2,000 square feet; 20 pounds to 8,000 square feet; 100 pounds per acre.

A BEAUTIFUL LAWN

It is universally conceded that nothing contributes so much to the beauty and attractiveness of the Home Grounds, the Park and the Cemetery, as a smooth, uniformly rich-green, well-kept lawn, which, to be perfect and a pleasure to walk on should have a firm, yet elastic and carpet-like surface. To secure this should, therefore, be the first consideration in laying out or renovating old grounds.

Turfing with fine old pasture sod, at one time a popular plan of making a lawn, is now almost entirely superseded by seeding because of the expense and difficulty in obtaining good, clean turf. On the other hand, **seeding is not only inexpensive, but is in reality the only means of securing a fine and permanent lawn**, depending only for its complete success on the thoroughness with which the ground is prepared, the quality and quantity of the seed sown, and the subsequent care of the lawn.

Our extensive experience in the seeding of lawns and exhaustive experiments with all kinds of lawn grasses have demonstrated beyond a doubt that many kinds are valueless, being too coarse or bunchy, and that one kind of grass alone can not be relied upon, in our climate, to produce and maintain a fine lawn. It is only by using a proper com-

bination of several suitable varieties, sown liberally, that the most satisfactory results can be obtained.

CURRIE'S LAWN GRASS MIXTURES are the result of years of study and careful observation, which, if our directions are followed in seeding, **never fail to produce quickly a thrifty growth of fine, velvety, rich green grass**, continuous in verdure from early spring to winter, and creating a springy, dense, carpet-like turf and permanently beautiful lawn.

THE QUANTITY OF SEED REQUIRED.—There is no fixed rule, but a liberal sowing is always satisfactory, while a light seeding is a waste of time and usually disappointing. A beautiful lawn may be produced in a few weeks, or it may not approach perfection for two or more seasons, according to the quantity of the seed sown. We have frequently, when in a hurry for a fine, close turf, sown at the rate of seven bushels of 20 lbs. each to the acre with the most successful results, but in general the following quantities will produce the best results: 1 qt. to 250 square feet, 1 lb. to 400 square feet, 5 lbs. to 2,000 square feet, 20 lbs. to 8,000 square feet, 100 lbs. per acre. For renovating old lawns, about one-half the above quantities, on the average, is required.

Mixtures of Lawn Grass Seeds

If required by mail, add 5c per quart, 10c per lb. for postage.

- CURRIE'S SPECIAL MIXTURE.**—This splendid mixture is composed of only the finest dwarf-growing, evergreen grasses; absolutely free from weed seeds or other impurities; especially adapted and mixed in the proper proportion to suit the American climate. In comparing the cost of our Special Lawn Grass with other mixtures sent out by the trade, remember that the natural weight per measured bushel of our mixtures is 20 lbs. per bushel, while that of most mixtures is only 14 lbs. per bushel. To obtain this exceptionally heavy weight per bushel, we must and do use only the heaviest and best samples of the various grasses which compose our mixture. This is in itself a guarantee against sowing weeds, and as the heavier the mixture the more thoroughly recleaned have been the component grasses. Pint 10c; quart, 20c; per lb., 30c; 2½ lbs., 70c; 5 lbs., \$1.35; 20 lbs., \$5.00; 100 lbs., sufficient to seed one acre, for \$22.50
- Fine Mixed.**—Also an excellent mixture, equal in quality to the best mixtures usually offered in the trade. Quart, 15c; 1 lb., 25c; 2½ lbs., 60c; 5 lbs., \$1.00; 10 lbs., \$1.85; 20 lbs., \$3.50; 100 lbs. 15.00
- Grass Mixture for Shade.**—A mixture of dwarf-growing grasses, thriving in shady places under trees. Pint, 15c; quart, 25c; lb., 35c; 2½ lbs., 85c; 5 lbs., \$1.60; 20 lbs., \$6.00; 100 lbs. 27.50
- Grass Mixture for Terraces and Slopes.**—A mixture designed to do away with the expensive method of sodding; it is composed of dwarf-growing evergreen grasses, possessing strong fibrous and creeping roots, and especially adapted for growing on sloping banks. Pint, 15c; quart, 25c; 1 lb., 35c; 2½ lbs., 85c; 5 lbs., \$1.60; 20 lbs., \$6.00; 100 lbs. 27.50
- Golf Link Mixture for Putting Green.**—Composed of the finest and most compact grasses suitable for the purpose. Pint, 15c; quart, 25c; 1 lb., 35c; 2½ lbs., 85c; 5 lbs., \$1.60; 20 lbs., \$6.00; 100 lbs. 27.50
- Golf Link Course Mixture.**—A mixture of grasses that will stand the wear. Quart, 20c; 1 lb., 25c; 2½ lbs., 60c; 5 lbs., \$1.00; 20 lbs., \$4.00; 100 lbs. 18.00
